                                                                                                                                                                                                                                   5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        099
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                780
and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length CDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a CDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EDO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                832
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          900

```
The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated ben denotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for Synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length coinses were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             418
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     538

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         969
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel isolated polypeptide (I) which comprising an imminogenic portion of a lung tumour protein or variant (P2) which have cytostatic activity. The polypeptides and polymolectides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polymuclectides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AGCACTAGACAAACTGAATGGATTTCAGTTAGAGAATTTCACCTTGAAAGTAGCCTATAT 461

                                                                                                                                                                                                                                                                                                          The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABU48959 to ABU49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

The present invention describes isolated human lung carcinoma polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligonucleotide and comparing the amount of polymucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in paramaceutical compositions, e.g. the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ02418 to ABQ02486 and ABB61866 to increase.
                                                                                                          Novel lung carcinoma polynucleotide sequences and polypeptides encoded by the polynucleotides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, proteins, proteins, proteins, polynuclectides, antibodies, proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABH48959 to ABH49300 and ABH7496 to ABH75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        642 AGGTGCCACCATTCGGAACATCACCAAACAGACCCAGTCTAAAATCGATGTCCACCGTAA

probable pre-mRNA splicing factor - fission yeast (Schizosaccharomyces pombe)
C;Species: Schizosaccharomyces pombe
C;Species: Schizosaccharomyces pombe
C;Date: 03-Dec-1999 #sequence_revision 03-Dec-1999 #text_change 03-Dec-1999
C;Accession: T41600
R;Lyne, M.; Rajandream, M.A.; Barrell, B.G.; Bothe, G.; Pohl, T.
Submitted to the EMBL Data Library, October 1998
A;Reference number: 222003
A;Accession: T41600
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Rocession: T41600
A;Readules: 1-388 cLNN
A;Residues: 1-388 cLNN
A;Residues: 1-388 cLNN

Transcription regulation; Trans-acting factor; Nuclear protein;

DNA-binding; Repeat; Alternative splicing.
human and mouse cDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: May interact with single-stranded DNA from the jupstream element (FUSB). May activate gene expression.
-!- SUBCELLULAR LOCATION: Nuclear (Probable).
-!- ALTERNATIVE PRODUCTS:
    Event=Alternative splicing; Named isoforms=2;
Name=1;
                                                                                                                                                                                         Isoid=096124-2; Sequence=VSP 008323; VSP 008324;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Detected in a number of cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /FTId=VSP 008323.

A predominantly nuclear protein affecting cytoplasmic localization of beta-actin mRNA in fibroblasts and neurons.";
J. Cell Biol. 156:41-52(2002).
-!- FUNCTION: Binds to a 54-nuclectide localization signal (the zipcode) found in the 3' untranslated region of beta-actin mRNA and may play a role in its localization.
-!- SUBCELLULAR LOCATION: Predominantly nuclear. Also detected in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ---AlaGluArgGly------ArgArgProProProAlaLeuThrGlyGlyAla

                                                                        "Cooperative assembly of an hnRNP complex induced by a tissue-specific homolog of polypyrimidine tract binding protein."; Mol. 20:7459-7479(2000).

1. FUNCTION: Binds to the dendritic targeting element and may play a role in mRNA trafficking (By similarity). Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate
                                                                                                                                                                                                                                                                                                  and HNRPH1.

SUBCELLUIAR LOCATION: Nuclear. A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites (By similarity).
                                                                                                                                                                                                                                                                                   Part of a ternary complex containing FUBP2, PTBP1, PTBP2
                                                                                                                                                                                                                                                                                                                                                                              TISSUE SPECIFICITY: Detected in neural and non-neural cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: Contains 4 KH domains.
CAUTION: Ref.3 sequence differs from that shown due to numerous
FUNCTION, AND INTERACTION WITH PIBP1; PTBP2 AND HNRPH1.

Role of Nova-1 in regulating alpha2N, a novel glycine receptor

T Role of Nova-1 in regulating alpha2N, a novel glycine receptor

T Plice variant, in developing spinal cord neurons.";

J. Neurobiol. $2:156-165 (2002).

J. Neurobiol. $2:156-165 (2002).

J. Dinding pre-mRNA in a sequence-specific manner to activate exon inclusion. It binds specifically to the sequence UCAUY (By similarity). Acts to regulate a novel glycine receptor alpha-2 chain splice variant (alpha-2N) in developing spinal cord.

C chain splice variant (alpha-2N) in developing spinal cord.

SIMILARITY: Contains 3 KH domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GlnAsnGlyThrHisThrGlyValProlleAspLeuAspProProAspSerArgLysArg

"Molecular characterization of MARTAL, a protein interacting with the dendritic targeting element of MARTAL, a protein interacting with the dendritic targeting element of MARTAL, a protein interacting with the J. Neurochem. 82:1039-1046(2002).

-I- FUNCTION: Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the faruspiram element (FUSE). May activate gene expression (By similarity). Binds to the dendritic targeting element and may play a role in mRNA trafficking.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a role in mRNA trafficking.
--- SUBDNIT: Part of a ternary complex containing FUBP2, PTBP1, PTBP2 and HNRPH1 (By similarity).
--- SUBCELLULAR LOCATION: Nuclear. A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites.
--- SIMILARITY: Contains 4 KH domains.

SUBCELLUIAR LOCATION: Loosely bound in the nucleus. May shuttle between the nucleus and the cytoplasm.
TISSUE SPECIFICITY: Abundantly expressed in skeletal muscle, thymus and peripheral blood leucocytes while a lower expression is beserved in prostate, spleen, testis, ovary, small intestine, heart, liver, adrenal and thyroid glands.
PTM: PHOSPHORYLATED. THE NON-PHOSPHORYLATED FORM(S) EXHIBITED THE STRONGEST POLY(RC)-BINDING ACTIVITY.
SIRNIARITY: Contains 3 KH domains.
CAUTION: There is probably a frameshift error in the nucleotide sequence of Ref.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUB-Lymphocytes,

"Nova regulates GABA(A) receptor gamma2 alternative splicing via a "Nova regulates GABA(A) receptor gamma2 alternative splicing via a distal downstream UCAV-rich intronic splicing enhancer.";

Mol. Cell. Biol. 23:4687-4700(2003)
-!- FUNCTION: Punctions to regulate alternative splicing in neurons b binding pre-mRNA in a sequence-specific manner to activate exon inclusion. It binds specifically to the sequence UCAVY. Most likely acts to activate the inclusion of exon E3A in the glycine receptor alpha-2 chain and of exon E9 in gamma-aminobutyric-acid receptor gamma-2 subunit via a distal downstream UCAV-rich
                                                                                                                                                                                                                                                                                                                                                                   intronic splicing enhancer.

15-lipoxygenase mRNNs differing in their 3'-untranslated regions.";
Nucleic Acids Res. 27:1828-1836(1999).
-i. FUNCTION: Single-stranded nucleic acid binding protein that binds
preferentially to oligo ac (By similarity).
-i. SUBCELLULAR LOCATION: Nuclear (By similarity).
-i. SIMILARITY: Contains 3 KH domains.
                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota, Metazoa; Chordata; Craniata; Vertebrata, Euteleostomi;
